WE DELIVER SOLUTIONS

In addition to hand-held demolition equipment, Darda develops and produces a comprehensive range of high-quality attachments for the demolition and recycling sector. All our components are designed with decades of experience especially for use under extreme working conditions.

When developing our environmentally friendly special demolition equipment we work in close cooperation with our customers. Directly and via our solid dealer network all over the world. We know what you expect from us: performance, quality, reliability and a comprehensive range of services. After all, professionals like you need perfect solutions for every type of work situation.

Your requirements deserve cutting-edge technologies that impact both work results and revenue growth, and are critical to the success of your business. Productivity that gives you a competitive advantage and sets you apart from the competition.

Darda – demolition technology in a class of its own!

COMPREHENSIVE SERVICE OFFERING

1

Reliable expertise

With decades of experience in all types of demolition and dismantling projects at home and abroad, Darda is able to offer you the best possible service. We are proud of our committed and well-trained staff, who have been supporting us and our customers for many years. In addition, all Darda distributors regularly participate in extensive training programs to ensure a consistent high standard of service throughout the world.

2

Fast spare parts delivery

Our efficient spare parts center, combined with a well-equipped service network, ensures effective problem resolution and fast parts delivery – two critical factors in ensuring that dismantling and demolition work is carried out reliably and on schedule. All original Darda spare parts are designed for optimum performance. This ensures longer life and maximum reliability.

3

10-year spare parts supply guaranty

That's how long we keep every spare part for your Darda equipment in stock – at least. Darda tools are designed for long and intensive use. You can count on it. Even after 10 years.

ROCK AND CONCRETE SPLITTERS

Handheld demolition equipment

SPLITTERS

Hydraulic Rock and Concrete Splitters

Darda – the inventor of the Hydraulic Rock and Concrete Splitter.

Hydraulic Rock and Concrete Splitters replace blasting and conventional demolition methods. They break down concrete or rock without pressure waves, without vibrations and with very little noise and dust. They have also gained a firm foothold in block extraction in the natural stone industry. Since the invention and worldwide patenting by Helmut Darda in 1967, Darda Rock and Concrete Splitters have been used successfully in over 80 countries around the world. The superior quality, high performance and very long service life of Darda Rock and Concrete Splitters is unsurpassed.

Functional principle

Conventional mechanical methods destroy the structure of the material by external forces. However, rock and concrete can withstand very high compressive forces from the outside. By comparison, resistance towards forces acting from inside towards outside is relatively small. The development of the Darda Rock and Concrete Splitting Equipment was born from this fact.

They work according to the safe wedge principle

First, a hole is drilled with the appropriate depth and diameter, into which the wedge set of the splitting cylinder is then inserted and aligned to determine the splitting direction. Hydraulic pressure then pushes the wedge between the two counter wedges and presses them apart. The effective splitting force of up to 413 tons or 4048 kN destroys the structure of concrete and rock from the inside.

A crack is formed in seconds. Smaller types of rebar in reinforced concrete break off.

Facts

- Enormous splitting force up to 413 t (4048 kN)
- Nearly noise free
- Low dust and low vibration
- Splitting direction can be set
- Ideal for confined spaces
- Easy to use
- Easy to transport
- Splits in seconds
- Controlled demolition
- Can be used under water

Advantages

Economic efficiency

Blasting usually requires the use of barriers as well as other time-consuming and costly safety procedures. An effort that is no longer necessary with Darda Rock and Concrete Splitters, because they do not cause flyrock or similar dangerous situations. Other work can therefore continue in parallel.

Safety

Darda Hydraulic Rock and Concrete Splitters are absolutely safe: no uncontrolled release of forces, flyrock, vibrations or even explosion pressure. Costly safety procedures, which are necessary when demolishing with conventional methods, are no longer necessary.

Environmental friendliness

No vibrations or dust are generated during hydraulic splitting; Darda Rock and Concrete Splitters operate practically without noise. There is no environmental impact. With the Darda Rock and Concrete Splitting Equipment, demolition work can be carried out without disruptions even in densely populated areas or enclosed spaces.

Rugged design

The extremely sturdy design of the Darda Rock and Concrete Splitters guarantees a very long service life even under the toughest operating conditions. Only minimal maintenance work is required.

Flexibility

Darda's Hydraulic Splitters are completely independent of carrier equipment such as excavators. The Splitters and Hydraulic Units are easy to transport. Their use is therefore possible even in difficult to access places.

Easy handling

The equipment is user-friendly and can be operated easily by just one person.

Exact working

In contrast to most conventional methods, Darda Rock and Concrete Splitters make it possible to work very accurately: the splitting direction and splitting course can be set in advance, making it possible to fix the splitting quantity. Material that is not meant to be split off is spared. This makes the Splitters also ideally suited for block quarrying in quarries.

SPLITTERS

Models and Accessories

A complete Rock and Concrete Splitter consists of three components:

Hydraulic Splitter

The Hydraulic Splitter consists of a control valve, cylinder, front head, and wedge set (one wedge and two counter wedges). The entire Hydraulic Splitter is made of the highest quality aluminum and steel materials to ensure maximum load-bearing capacity and low weight. In a specially developed and complex hardening process, the counter wedges also receive a carbide layer. This makes it possible to transmit the very high forces.

Hydraulic Power Unit

An electric, air, diesel or petrol engine powers a high-pressure hydraulic pump. A pressure relief valve limits the system pressure to 50 MPa. Both wheeled and portable units are available. Depending on the model, up to five Splitters can be operated in parallel.

Hydraulic hoses

Rugged multi-layer hoses connect the Splitters to the Hydraulic Power Unit.

Accessories

Enlarging counter wedges

In order to enlarge the resulting crack, the standard counter wedges can be quickly and easily replaced with enlarging counter wedges. After expansion, particularly strong reinforcement can be broken off easily.

Pressure shells

In a drill hole with narrow diameter, the high splitting force acts on a very small surface area. This results in extremely high surface pressure. In case of heavily reinforced concrete, the concrete may sometimes compact during splitting and only an oval drill hole is created. Only short cracks form around the hole. The rebars do not tear off. Two thick, large pressure shells provide the solution. They are inserted into a core bore of \varnothing 100 mm | 4 inch and enclose a wedge set of the splitter. They are also often used in poor quality concrete.

Special Lubricant

During the splitting process, very high forces act on the wedge set. In order to reduce wear, the pressure surfaces of the wedge and the counter wedges must be lubricated regularly. In a long development and test phase, Darda Special Lubricant was proven to significantly reduce the high friction forces and guarantees maximum utilization of the splitting force.

COMBI- SHEARS

Handheld demolition equipment

[Go to product film](#)

COMBI-SHEARS HCS8

Cutting, breaking, expanding – all hydraulically

The hand-held, Hydraulic Combi-Shears HCS8 are equipped with the latest cutter and gripper technology and are particularly suitable for coring buildings. They are also well suited for a variety of other applications. One person can easily handle the compact and light-weight device.

The powerful Combi-Shears are fast and very productive. They produce no dust, no vibrations and very little noise. This also makes their indoor use safe and reliable.

The solution for many tasks

The HCS8 basic model is available with four different types of inserts.

Concrete Jaw | HCS8 J

The HCS8 J concrete jaw can be used to dismantle concrete walls up to 15 cm | 6 inch thickness (depending on the compressive strength of the concrete). Useful for demolition of thin partition walls, facade panels or in the renovation of prefabricated buildings.

Brick Jaw | HCS8 B

Equipped with the brick jaw set, the HCS8 B can break through walls up to 32 cm | 12 inch thickness. It replaces the conventional sledgehammer and is much more efficient and user-friendly due to its hydraulic mode of operation.

Sickle Blade | HCS8 S

Equipped with the sickle blade set, the HCS8 S is able to cut pipes, round materials, disconnected power cables and profiles made of sheet metal or wood. The sickle blades are designed to hold the material to be cut and to prevent slippage.

Shear and Expander | HCS8 C

The HCS8 C version is specially designed to expand and separate material. Radiators can be pushed out from the wall, door frames can be broken out, and splitted concrete pieces can be separated. In addition to steel reinforcements up to 16 mm | 5/8 inch, the HCS8 C also cuts a wide variety of construction materials.

Facts

- Bites through concrete and masonry with accuracy
- Cuts metal, cable, wood, sheet metal, rebar etc.
- Breaks up a wide variety of building materials
- Versatile uses, e.g. for gutting buildings
- Vibration-free
- Nearly dust and noise free
- Easy-to-handle and lightweight

A complete system for different applications

The inserts can be changed easily in just a few minutes. The HCS8 Combi-Shears complement Darda's Hydraulic Rock and Concrete Splitters perfectly.

Together they can be connected to a Darda Hydraulic Power Unit. The maximum system pressure is 50 MPa.

COMBI-SHEARS HCS8

Typical applications and possibilities of use

Functional description

The HCS8 Combi-Shears develop a high cutting or crushing force when closing the shears or jaws. A high breaking force is also generated when the tools are opened. Both are optimally utilized with the HCS8 Combi-Shears. Closing and opening can be accurately controlled via the control valve integrated into the device body. The working process can be controlled at all times.

Twice as fast through brick and concrete

"Without the powerful HCS8 Combi-Shear from Darda, the demolition work would have taken about twice as long," confirms Mr. Haberer, owner of Rolf Haberer GmbH in Geisingen/Germany. His company was entrusted with the demolition of masonry walls and concrete balustrades in the course of the reconstruction of surgical facilities. The high demolition power, rapid working mode, low noise operation and low dust load were the main advantages of using the HCS8 Combi-Shear.

The most economical option

The HCS8 Combi-Shears are always preferred when, for example, excavators with appropriate attachments cannot be used on scaffolding, the use of a special crane with a concrete crusher is complicated and too expensive, or when blasting is not feasible. Especially when surrounding buildings and objects must not be damaged and business should continue undisturbed.

HYDRAULIC POWER UNITS

Handheld demolition equipment

darda[®]

HYDRAULIC POWER UNITS

The reliable companions

Our Hydraulic Power Packs are available in four different power systems.
Depending on your requirements and demands, you will find the right solution!

AP2 | Air motor

BP2 | Gasoline engine

EP3 | Electric motor

D4 E | Diesel engine

With the exception of the mobile diesel version, the basic model is identical for all portable units. All variants are equipped with the latest, perfected technology and upgraded with convenient and profitable details.

All Darda Splitters and Combi-Shears can be combined with any of the four available power systems.

General information on portable Power Units

- Two-stage pump (low pressure and high pressure)
- Oil filter in return line
- Oil filler neck with sieve
- Mobile due to transport wheels and extendable handle bar
- Manifold block with pressure gage
- Oil level indicator with temperature display
- Connection of three devices possible
- Possibility of securing against start-up by third parties (accident prevention)
- Complies with Directive 2000/14/EC (noise emission)

CONCRETE CRUSHERS

Carrier-operated attachments

Go to product film

CONCRETE CRUSHERS

**Best
power-to-weight
ratio on the market**

True powerhouses

Attachments for Brokk
demolition robots and excavators
from 0.7 to 15 tons

High-quality materials and the special pressure booster system designed and developed by Darda enable the Darda Concrete Crushers to achieve a high crushing force with a minimum weight. This makes them suitable for small carriers for which conventional crushers are too heavy. Thanks to their large opening width, they can break off very thick concrete pieces and also handle super hard and heavily reinforced concrete, which would otherwise only be possible with much larger crushers.

- The optimal attachment for every weight class
- Rugged booster system made by Darda
- Extremely large jaw openings
- Maintenance-friendly
- Stable in value

Optional with hydraulic rotary drive

Pivot bearing for 360° rotation

Integrated pressure booster

Exchangeable rebar blades

Exchangeable crushing tips

Additional crushing tips (optional)

CONCRETE CRUSHERS

Typical applications and possibilities of use

Class instead of mass

The partial demolition of buildings often poses a great challenge because part of the structure must remain intact. These challenges can be mastered with flying colors using standard carriers or a Brokk Demolition Robot equipped with Darda Concrete Crushers.

Advantages

A working method that is as low noise, low dust and low vibration as possible and a high safety standard with regard to the remaining parts of the building.

**Sensitive
building
demolition**

CONCRETE CRUSHERS

Typical applications and possibilities of use

David vs. Goliath in demolition

In the sensitive top-down demolition of high-rise buildings, the use of Darda Concrete Crushers has repeatedly proven to be the best and most effective method. Conventional demolition methods are often not possible due to strict noise, dust and vibration regulations. And their usability and high level of control also make them indispensable in chimney demolition.

**Top Down /
Chimney
demolition**

CONCRETE CRUSHERS

Typical applications and possibilities of use

Rapid demolition in confined spaces

What are the options when a relatively large amount of extremely hard, reinforced concrete has to be demolished in basement rooms with limited access and space? And - as always - in the shortest possible time? With their sensational power to weight ratio, Darda Crushers are the number one problem solver whenever there is little space available at the demolition site or large tools cannot be used, but still a lot of power is required.

**Constricted
interior demolition /
core removal**

Steel Shears

STEEL SHEARS

Maximum power for the best cut

High-quality materials and the special pressure booster system designed and developed by Darda enable the Darda Steel Shears to achieve high cutting power with minimum weight. Thanks to its large jaw opening, even large sheet metal profiles can be cut easily and safely where other shears fail.

For carriers from 3 - 15 tons.

STEEL SHEARS

Typical applications and possibilities of use

Whether as an attachment on an excavator, truck crane or Brokk demolition robot: This strong and rugged Steel Shears can master many different tasks – even the exceptional ones! Anything is possible: like the scrapping of plane wrecks at an air base as seen here.

Risk of explosion in an underground cavern storage facility – how can the aboveground pipe system be safely and quickly dismantled? The Darda CC700 S Steel Shear makes this type of work possible.

Concrete Crushers are frequently used in all types of demolition work and often need to be supported by cutting tools that can be flexibly equipped or exchanged. The CC440 S and CC700 S Steel Shears can be converted to Concrete Crushers and vice versa.

TANK CUTTER TC120

Continuous cold cutting

The high-performance Tank Cutter is ideal for indoor use due to the pressure booster system designed and developed by Darda, even with small carriers of the 3 to 8 ton class.

Steel tanks and plates up to 15 mm | 0.6 inch thickness can be reliably cut "cold" using the carrier-operated Tank Cutter. Increase your productivity and even cut up coated tanks with residual contents worry-free.

Facts

- Cold cut alternative to flame cutting or abrasive cutting
- Ideal for dismantling tanks and plates in buildings
- Adjustable blade clearance for thick and thin sheet metal gages
- Exchangeable blades
- Up to 20 cm | 8 inch per cut
- Maintenance-friendly and rugged

Specifications | Tank Cutter TC120

| Dimensions and weights | | |

TANK CUTTER TC120

Typical applications and possibilities of use

Whether in scrapping, cutting up metal structures, as a supplement in industrial demolition or in cramped interior demolition/core removal – the Darda Tank Cutter can do it all! Its cold and draw cut functionality sets the Darda Tank Cutter apart from the conventional methods of flame cutting or grinding, especially with flammable residual contents.

This picture shows the dismantling of train waggons.

Finally: safe cold cutting

The Darda TC120 opens up completely new markets! Demolition and recycling professionals are enthusiastic about the functionality of the innovative, carrier-operated cutting tool for mini-excavators in the 3 to 8 ton class as well as for the Brokk 200 and 300 demolition robots. During continuous cutting, the Tank Cutter is held securely in the cutting gap. Even curved cuts are possible with the conical neck. The punched cutting gap is approx. 5 cm | 2 inch. Coated or uncoated tanks, steel walls, plates, pipelines etc. can be cut easily and effectively.

MULTI CUTTERS

Simply the right way of cutting

Darda Multi Cutters, the universal cutting tools with a maximum jaw opening of 350 mm | 14 inch, are true champions of building coring work. They cut supply lines and pipes, cables, steel beams and much more.

For carriers from 1.2 - 9 tons.

MULTI CUTTERS

Typical applications and possibilities of use

The carrier-operated Multi Cutters offer a high power/weight ratio in a slim and compact design. With this, Darda covers the wide range of requirements for a lightweight, economical steel cutting tool for small carriers to be used in difficult to access places.

The Multi Cutters stand for safe and efficient cutting of steel material, utility lines and cables in a variety of industries including demolition, core removal, construction and nuclear. Due to their low weight, they can tear down installations and do lift work without affecting the stability of the Brokk machine or excavator. The 360° rotary drive enables precise positioning.

This modern tools open up new possibilities for you, especially in terms of speed and safety. Because as a demolition specialist, you are very often dependent on compact size and low weight, but you cannot do without power and performance.

ROCK SPLITTERS

Carrier-operated attachments

[Go to product film](#)

ROCK SPLITTERS

C20

Carrier-operated splitting –
safe and highly productive

The Hydraulic Rock Splitters convince with their high productivity and safety in operation. With a high splitting force that is independent of the input pressure and a slim yet rugged design, they are designed for a wide range of rock demolition applications. The Rock Splitters are also ideal for use in confined conditions, such as tunnel, trench or foundation work.

Depending on type and composition of the rock, there are two possible lengths of wedge set to choose from. For horizontal and vertical use with diverse and special splitting requirements. And best of all: Due to the automatic lubrication system, no manual greasing of the wedge set is necessary.

For carriers from 5 - 7 tons.

With optional 360° rotary drive

Integrated pressure booster

**Up to 1800 t
splitting force**

Two different
mounting options

Integrated automatic
wedge lubrication system

Wedge set in two sizes

Facts

- Easy replacement of wear parts
- Rotatable and very maneuverable
- Automatic wedge lubrication
- Multiple mounting options
- Lowest power-to-weight ratio on the market
- Use even under water

Specifications | Rock Splitters C20

| Dimensions and weight | Vertical | | Horizontal | |
|---|------------------------|-----------------|-----------------------|-----------------|
| | C20 C | | C20 J | |
| Length ¹ x Width x Height | 1720 x 305 x 394 mm | 68 x 12 x 16 in | 2153 x 450 x 420 mm | 85 x 18 x 17 in |
| Weight with N-wedge set ² | 300 kg | 660 lb | 390 kg | 860 lb |
| Carriers | | | | |
| Recommended carrier weight ³ | 5 - 7 t | | 11000 - 15400 lb | |
| Recommended Brokk machines | Brokk 300 / 500 / 520D | | | |
| Hydraulic connection | | | | |
| Connection pressure, min. | 17,5 MPa | | 2540 psi | |
| Connection pressure, max. | 22 MPa | | 3190 psi | |
| Oil flow, min. - max. | 25 - 80 l/min | | 7 - 21 gal/min | |
| Rotary drive connection pressure, max. | 22 MPa | | 3190 psi | |
| Rotary drive oil flow, max. | 30 l/min | | 8 gal/min | |
| Operating pressure | 50 MPa | | 7250 psi | |
| Wedge set | | | | |
| Wedge set length N / L | 640 / 840 mm | | 25.2 / 33.1 in | |
| Drillhole diameter | 76 mm | | 3 in | |
| Drillhole depth N / L, min. | 750 / 950 mm | | 29.5 / 37.4 in | |
| Splitting distance N / L | 22 / 25 mm | | 0.9 / 1 in | |
| Theoretical splitting force N / L | 1500 / 1800 t | | 3307000 - 3968000 lbf | |
| Consumables | | | | |
| Darda Special Lubricant | | | | |

¹ Without wedge set ² Without mounting plate ³ Depending on carrier lifting capacity

ROCK SPLITTERS

C20

Typical applications and possibilities of use

The C20 Rock Splitters break large boulders and solid rock in a short period of time, e.g. in mining and shaft construction as well as in tunneling for cross passages.

The working method is quiet, safe and generates practically no vibrations or dust, unlike demolition hammers or explosives. It offers demolition contractors a productive alternative in areas where potentially disruptive demolition methods are not permitted, such as near hospitals. The C20 is also the safe alternative compared to hand-held tools such as pneumatic demolition hammers, whose heavy vibrations cause fatigue and physical injury over time.

Using the C20 with a Brokk demolition robot enables the operator to work from a safe distance with the remote control and harness – typically 10 to 20 meters.

All in all, the C20 Rock Splitters increase productivity in industries such as mining, quarrying, tunneling, construction and demolition.

UPLOAD TOOL

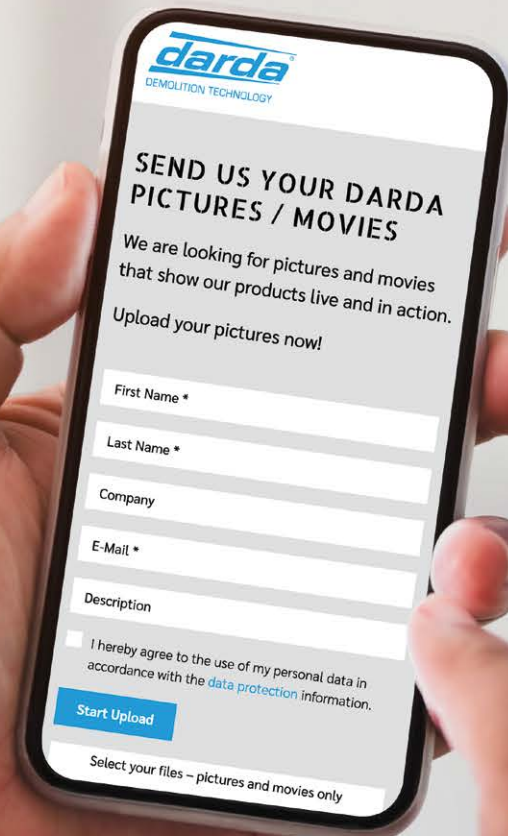

We are looking for pictures and movies that show our products live and in action.

See how our hydraulic Rock and Concrete Splitter splits a huge rock or how our Concrete Crusher with its enormous breaking and cutting force is demolishing a concrete wall. We give this moment to everyone. That's why we are delighted to see all the pictures/movies in which our Darda products are shown.
